MOHAMED ISLEM BEN JABALLAH

Senior XR Engineer with 7 years of experience.
Proven track record of developing innovative & optimized immersive solutions.
Dedicated to building successful projects that put a smile on clients faces.

EDUCATION

Engineering Master's Degree
National Institute of Applied Science and Technology

2016- 2022 Tunis,Tunisia

Major: Software Engineering
Minor: DevOps

SKILLS

- **Software :**
  Unity | Blender | Substance
- **Programming Languages:**
  C# | C++ | HLSL | SQL | TypeScript
- **Technologies:**
  XR | Git | CI/CD | BIM | Web API

LANGUAGES

- **Arabic** : Native Language
- **English** : Bilingual Proficiency
- **French** : Bilingual Proficiency

EVENTS

- **Head of AudioVisual**
  Tunisian National Robotics Day
- **Head of AudioVisual**
  CinéRadio INSAT
- **INTERFERENCE** Voluntary
  Installed Hans Kotter's suspended electrical artwork, featured on L'instantM
- **INTERPOL** Capacity Building & Training Speaker (2025)
- **University Instructor** Practical VR instructor and mentor at INSAT (2023)

CERTIFICATIONS

AWS ML Associate

AWS AI Practitioner

AWS Cloud Practitioner

PROFESSIONAL EXPERIENCE

Lead Software Engineer
AI Speech-to-Speech Conversational 3D Agent

Jun 2025 – Present Millennium Technologies – Abu Dhabi, UAE

- Engineered a real-time speech-to-speech AI agent solution as an independent Unity package allowing us to easily integrate it into multiple VR/AR and classic applications.
- Built low-latency audio pipelines with ElevenLabs, synchronized with Character Creator 5 for real-time animation blending and using an LLM agnostic approach.

EDUVR — Multiplayer Educational Platform VR-Desktop-Web

Aug 2024 – Jun 2025 Millennium Technologies – Abu Dhabi, UAE

- Architected the client-side Unity application utilizing OpenXR targeted at Meta Quest 3/3S.
- Optimized VR performance to maintain +90 fps using VR-friendly shaders, distance-based LOD asset loading, and Unity adaptive performance tools.
- Architected a server-authoritative multiplayer system using Photon for synchronized VR interactions across 6 backend microservices.

XR Hardware Consultant
Large-scale immersive room C.A.V.E & XR hub

Mar 2023 – Mar 2024 Park of Economic Activities – Zarzis, Tunisia

- Led technical design for Africa's second C.A.V.E Installation, configuring a multi-GPU Nvidia A6000 hardware setup.
- Adapted and upgraded third-party Unity middleware packages to seamlessly integrate with custom C.A.V.E. projection mapping and tracking requirements.

VR Game Developer
Adaptive multiplayer VR experience (biofeedback-driven)

Feb 2022 – Aug 2022 ICONIK SA – Marseille, France

- Integrated real-time biofeedback (blood pressure and SpO2 sensors) to dynamically scale VR gameplay mechanics and enemy behavior.
- Utilized Mirror for robust local multiplayer networking in a co-op VR environment.

Backend API Developer
Connected automotive web platform

Jan 2021 – Jan 2022 Rooly – Tunis, Tunisia

- Designed scalable C# .NET WebAPI services, demonstrating strong backend architecture skills critical for connected VR and multiplayer game servers.

Unity 3D Developer
Digital twin platform for BIM management

May 2020 – Mar 2021 DATA PM – Tunis, Tunisia

- Authored custom HLSL shaders for the Universal Render Pipeline (URP) to highly optimize dynamically generated Unity materials.
- Slashed Unity load times by 70% using asynchronous C# libraries to stream external data.
- Engineered a custom IFC -> Json stream -> GameObject pipeline to visualize BIM buildings.
- Fine-tuned an Indoor camera position prediction AI trained on a Unity generated dataset. Then used transfer learning to use it for live camera feed

VR Simulation Developer
Immersive Fitness Simulation

May 2019 – Mar 2020 Blackdune Studio – Tunis, Tunisia

- Developed procedural environment generation for an endless runner VR experience.
- Prototyped embedded bike hardware for motion tracking (speed and lean detection) mapped to PhysX-based virtual bicycle mechanics.
